

The traditional TCD / WCD / TSC controls have been renewed.

The new design matches the style of the QNC Quick Nautical Control commands, which feature a glossy black tempered-glass panel.

The new TCD / WCD / TSC controls differ from the QNC range in the choice of materials, in fact they feature a special and scratch-resistant glossy lexan instead of the tempered glass.

The fixing method is different as well: the traditional screws have been replaced by a special 3M VHB double-sided gasket which allows for faster installation.

The technical and operating characteristics of the new TCD / WCD / TSC controls are identical to the previous models'.
