3 YEAR
WARRANTY

QUALITY AUDIO REPRODUCTION

Continuing to set the benchmark for marine audio entertainment, the new XS subwoofer brings you Fusion's trademark quality audio reproduction, enhanced marine aesthetics and an LED lighting solution at a mid-range price point.

Designed to consistently produce quality low frequency audio at any volume level, the XS subwoofer is built for on-board performance season after season.

INNOVATIVE RGB ILLUMINATED CONE

The sports style LED subwoofer features an innovative cone to provide bright and even LED illumination on board in a range of colors to further enhance your on-water audio entertainment experience. Choose a color to match the mood, set the tone or complement your music, and enjoy bright, even illumination on board.

VERSATILE DESIGN

Designed to add low frequencies to your audio system, the XS subwoofer can be traditionally wired into your system through an amplifier. Alternatively, create a 2.1 audio zone by connecting two speakers and a subwoofer directly to a Fusion multi-zone stereo with DSP, without the need to use an external amplifier. Simply connect a pair of speakers to the zone 1 speaker connections, and the XS Series subwoofer to the left and right speaker connections of zone two, then select the applicable DSP profile for setup.

- Simplifies installation
- Reduces system cost
- Easy way to add bass

IP65 WEATHERPROOF

The XS subwoofer is rated IP65 for water and dust ingress protection from the front, while also meeting industry standards for UV and salt fog protection. This makes it a perfect subwoofer for both indoor and outdoor installation on any vessel in the harsh marine environment.

LOW PROFILE GRILLE

The stylish grilles not only complement modern on-board aesthetics, but also reduce the risk of damage from people and objects brushing past, due to the low protrusion from the wall when installed correctly.

ACCESSORY (OPTIONAL)

The **MS-RGBRC** wireless remote controller lets you take full control of your Fusion RGB subwoofer illumination, from the convenience of wherever you are on board. Change the color, brightness, speed and mode on the touch controls. The wireless remote can control up to three lighting zones and will function up to 10m from the LED control module.

Note: For control of additional zones, additional LED control modules must be purchased.
